Module Image

Module 1 – Legal Text Preprocessing and Linguistic Analysis

I worked on the preprocessing and linguistic analysis of property dispute judgment text. The module performs sentence segmentation and tokenization to convert the judgment into manageable text units. It also applies Part-of-Speech (POS) tagging to identify the grammatical category of each word. The processed output is organized into structured linguistic information for further analysis.

Project Description:

I contributed to the development of Module 1 – Legal Text Preprocessing and Linguistic Analysis of the Property Dispute Judgment Interpretation System. My work focuses on preparing raw property dispute judgments for further NLP analysis. The model performs text cleaning, sentence segmentation, tokenization, and Part-of-Speech (POS) tagging to identify the grammatical category of each word. The processed information is then converted into a structured linguistic representation and passed to Module 2 for Feature-Based Grammar parsing. This preprocessing model provides a reliable foundation for analyzing the structure and meaning of legal judgment text.
